

LLM-assisted generation and selection

DECISION

INPUTS

current lineage · context ·
prior feedback / failure

PROCESSING

⚡ LLM selects one lever

OUTPUTS

☁️ ⚙️ code or deployment
+ rationale

❗ **FAILURE**
malformed or unavailable
decision

CODE

INPUTS

scenario contract · current
code · repair evidence

PROCESSING

generate code → build →
run functional tests

OUTPUTS

☁️ validated source + image

❗ **FAILURE**
parse / build / test /
runner failure

SPEC

INPUTS

cluster capacity · current
spec · validation evidence

PROCESSING

generate <SPEC> → capacity
+ connection validation

OUTPUTS

⚙️ validated spec.yaml

❗ **FAILURE**
parse / schema / capacity /
budget failure

Framework execution and measurement

DEPLOY

INPUTS

☁️ ⚙️ tested image + validated
spec.yaml

PROCESSING

render + apply manifests →
check ready

OUTPUTS

reachable deployment
record

❗ **FAILURE**
unschedulable / image-pull /
crash-loop / readiness /
service failure

BENCH

INPUTS

deployment record ·
verified workload · load profile

PROCESSING

📊 📄 Locust load test +
adaptive controller

OUTPUTS

feedback report +
sustained goodput

❗ **FAILURE**
harness failure or
unreachable target
