

CELL

- scenario
- framework
- model config

EXAMPLE

scenario: recipes
framework: Python/Flask
model config: claude-opus-4-8, T=0.2

1 or more samples

SAMPLE

one independent code-generation draw, e.g. sample0/

1 or more experiments (runs)

EXPERIMENT

- iterations N
- baseline attempts (code / spec)
- LLM budget
- k8s cluster profile
- load profile

EXAMPLE

iterations N: 10
attempts code: 5
attempts spec: 5
LLM budget: \$10
cluster: emulab

N iterations, one pass of the loop below each

ITERATION

one pass of the refinement loop, repeated until the iteration budget is spent

READS

-  current code
-  current spec.yaml
-  feedback from the last successful iteration

PRODUCES (exactly one of code / spec, every iteration)

-   refined code OR refined spec.yaml
-   feedback report (load test + diagnostics)
-  failure report, if this iteration fails

repeats
